

VIA C3™ Processor

The VIA C3™ is the coolest processor on the market, delivering ultra low power consumption derived from its innovative design and state of the art 0.13 and 0.15 micron manufacturing processes. With robust application performance, Socket 370 flexibility and rock solid reliability, the VIA C3™ processor provides a compelling solution for the creation of an exciting new generation of PCs, notebooks and Digital PC Appliances, offering affordable Internet access to more people than ever before.

Cool Processing

The coolest running processor on the market

Cool Technology

The smallest x86 processor die

Cool Performance

A rich computing and online experience

Cool Innovation

Enabling the creation of new generation of energy efficient Desktop PCs, Mobile PCs and Digital PC appliances

Cool Value

Industry benchmark for affordable Internet computing
